

# Horses can have asthma too?

THE UNIVERSITY  
of ADELAIDE

Equine asthma, causes poor performance or poor willingness to go forward in race, pleasure and sport horses and may be associated with chronic intermittent coughing and/or nasal discharge. With your help this survey will provide critical information to help improve the health and welfare of Australian horses. It is expected to highlight factors important to **prevention and management of equine asthma.**

**We are inviting all horse owners/trainers to complete our short 15-minute online survey from the QR Code below.**

Participants have the option to remain anonymous, answers will be treated with the utmost confidentiality and all data and results will be deidentified. Participants will also have the option of being entered into a prize draw, sponsored by Kentucky Equine Research and Barastoc Horse Feeds; first prize of a \$100 Kentucky Equine Research (KER) voucher, 2<sup>nd</sup> through 5<sup>th</sup> prize of a \$50 KER voucher. The next 50 draws will receive a voucher for their choice of a bag of Calm Performer or Complete Performer from Barastoc Horse Feeds.
